Examples: Lists

Lists in Environment Diagrams

Assume that before each example below we execute:

```
s = [2, 3]
t = [5, 6]
```

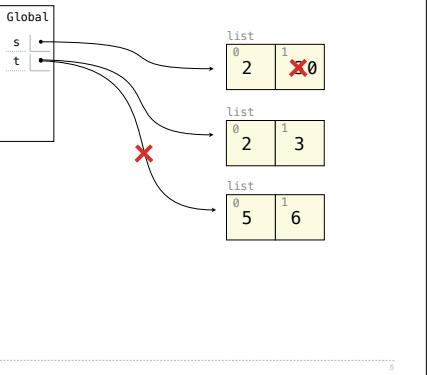

Operation	Example	Result
append adds one element to a list	s.append(t) t = []	s → [2, 3, [5, 6]] t → []
extend adds all elements in one list to another list	s.extend(t) t[1] = 0	s → [2, 3, 5, 6] t → [5, 0]
addition & slicing create new lists containing existing elements	a = s + [t] b = a[1:] a[1] = 9 b[1][1] = 0	s → [2, 3] t → [5, 0] a → [2, 9, [5, 0]] b → [3, [5, 0]]

Lists in Environment Diagrams

Assume that before each example below we execute:
 $s = [2, 3]$
 $t = [5, 6]$

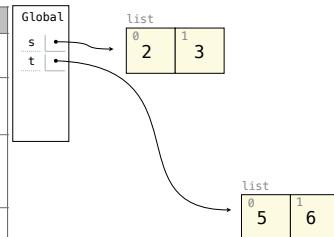

Operation	Example	Result
append adds one element to a list	$s.append(t)$ $t = \emptyset$	$s \rightarrow [2, 3, [5, 6]]$ $t \rightarrow \emptyset$
extend adds all elements in one list to another list	$s.extend(t)$ $t[1] = \emptyset$	$s \rightarrow [2, 3, 5, 6]$ $t \rightarrow [5, \emptyset]$
addition & slicing create new lists containing existing elements	$a = s + [t]$ $b = a[1:]$ $a[1] = 9$ $b[1][1] = \emptyset$	$s \rightarrow [2, 3]$ $t \rightarrow [5, \emptyset]$ $a \rightarrow [2, 9, [5, \emptyset]]$ $b \rightarrow [3, [5, \emptyset]]$
The list function also creates a new list containing existing elements	$t = list(s)$ $s[1] = \emptyset$	$s \rightarrow [2, \emptyset]$ $t \rightarrow [2, 3]$

Lists in Environment Diagrams

Assume that before each example below we execute:
 $s = [2, 3]$
 $t = [5, 6]$

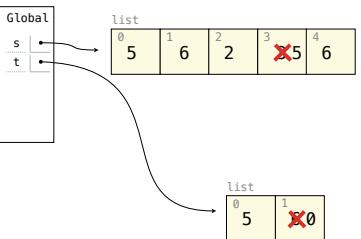

Operation	Example	Result
append adds one element to a list	$s.append(t)$ $t = \emptyset$	$s \rightarrow [2, 3, [5, 6]]$ $t \rightarrow \emptyset$
extend adds all elements in one list to another list	$s.extend(t)$ $t[1] = \emptyset$	$s \rightarrow [2, 3, 5, 6]$ $t \rightarrow [5, \emptyset]$
addition & slicing create new lists containing existing elements	$a = s + [t]$ $b = a[1:]$ $a[1] = 9$ $b[1][1] = \emptyset$	$s \rightarrow [2, 3]$ $t \rightarrow [5, \emptyset]$ $a \rightarrow [2, 9, [5, \emptyset]]$ $b \rightarrow [3, [5, \emptyset]]$
The list function also creates a new list containing existing elements	$t = list(s)$ $s[1] = \emptyset$	$s \rightarrow [2, \emptyset]$ $t \rightarrow [2, 3]$
slice assignment replaces a slice with new values	$s[0:0] = t$ $s[3:] = t$ $t[1] = \emptyset$	

Lists in Environment Diagrams

Assume that before each example below we execute:
 $s = [2, 3]$
 $t = [5, 6]$

Operation	Example	Result
append adds one element to a list	$s.append(t)$ $t = \emptyset$	$s \rightarrow [2, 3, [5, 6]]$ $t \rightarrow \emptyset$
extend adds all elements in one list to another list	$s.extend(t)$ $t[1] = \emptyset$	$s \rightarrow [2, 3, 5, 6]$ $t \rightarrow [5, \emptyset]$
addition & slicing create new lists containing existing elements	$a = s + [t]$ $b = a[1:]$ $a[1] = 9$ $b[1][1] = \emptyset$	$s \rightarrow [2, 3]$ $t \rightarrow [5, \emptyset]$ $a \rightarrow [2, 9, [5, \emptyset]]$ $b \rightarrow [3, [5, \emptyset]]$
The list function also creates a new list containing existing elements	$t = list(s)$ $s[1] = \emptyset$	$s \rightarrow [2, \emptyset]$ $t \rightarrow [2, 3]$
slice assignment replaces a slice with new values	$s[0:0] = t$ $s[3:] = t$ $t[1] = \emptyset$	$s \rightarrow [5, 6, 2, 5, 6]$ $t \rightarrow [5, \emptyset]$

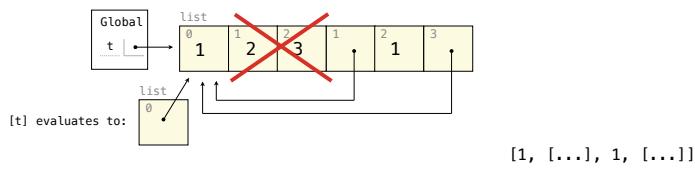

Lists in Environment Diagrams

Assume that before each example below we execute:
 $s = [2, 3]$
 $t = [5, 6]$

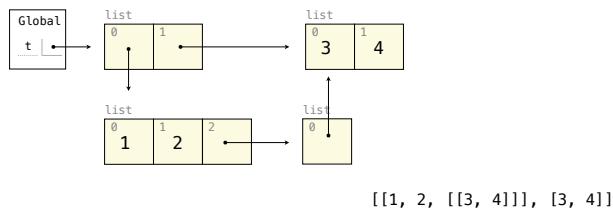

Operation	Example	Result
pop removes & returns the last element	$t = s.pop()$	$s \rightarrow [2]$ $t \rightarrow 3$
remove removes the first element equal to the argument	$t.extend(t)$ $t.remove(5)$	$s \rightarrow [2, 3]$ $t \rightarrow [6, 5, 6]$
slice assignment can remove elements from a list by assigning [] to a slice.	$s[:1] = []$ $t[0:2] = []$	$s \rightarrow [3]$ $t \rightarrow []$

Lists in Lists in Lists in Environment Diagrams

```
t = [1, 2, 3]
t[1:3] = [t]
t.extend(t)
```

```
t = [[1, 2], [3, 4]]
t[0].append(t[1:2])
```

Examples: Objects

Land Owners

Instance attributes are found before class attributes; class attributes are inherited

```
class Worker:
    greeting = 'Sir'
    def __init__(self):
        self.elf = Worker
    def work(self):
        return self.greeting + ', I work'
    def __repr__(self):
        return Bourgeoisie.greeting

class Bourgeoisie(Worker):
    greeting = 'Peon'
    def work(self):
        print(Worker.work(self))
        return 'I gather wealth'

jack = Worker()
john = Bourgeoisie()
jack.greeting = 'Maam'
```

```
>>> Worker().work()
'Sir, I work'
<class Worker>
greeting: 'Sir'

>>> jack
Peon
<class Bourgeoisie>
greeting: 'Peon'

>>> jack.work()
'Maam, I work'

>>> john.work()
Peon, I work
'I gather wealth'

>>> john.elf.work(john)
'Peon, I work'
<class Bourgeoisie>
elf: _____
greeting: 'Maam'

john <Bourgeoisie>
elf: _____
```

Examples: Iterables & Iterators

Using Built-In Functions & Comprehensions

What are the indices of all elements in a list s that have the smallest absolute value?

`[-4, -3, -2, 3, 2, 4]` \triangleright [2, 4] `[1, 2, 3, 4, 5]` \triangleright [0]
0 1 2 3 4 5

What's the largest sum of two adjacent elements in a list s? (Assume `len(s) > 1`)

`[-4, -3, -2, 3, 2, 4]` \triangleright 6 `[-4, 3, -2, -3, 2, -4]` \triangleright 1

Create a dictionary mapping each digit d to the lists of elements in s that end with d.

`[5, 8, 13, 21, 34, 55, 89]` \triangleright {1: [21], 3: [13], 4: [34], 5: [5, 55], 8: [8], 9: [89]}

Does every element equal some other element in s?

`[-4, -3, -2, 3, 2, 4]` \triangleright False `[4, 3, 2, 3, 2, 4]` \triangleright True

Examples: Linked Lists

Linked List Exercises

Is a linked list s ordered from least to greatest?

Is a linked list s ordered from least to greatest by absolute value (or a key function)?

Create a sorted Link containing all the elements of both sorted Links s & t.

Do the same thing, but never call Link.
